

# Adventures in Bayesian Structural Time Series

## *Part 4: Analyzing SST Data With Regression*

Andrew Bates, Josh Gloyd, Tyler Tucker

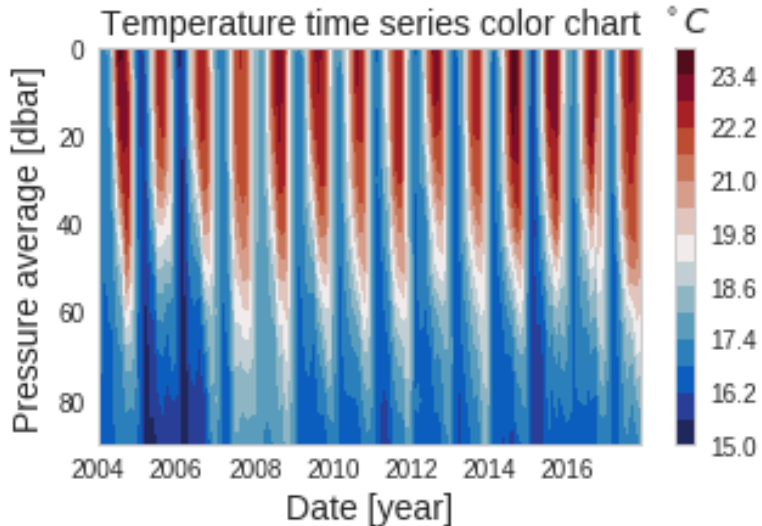

- ⊠ SST data with covariates
- ⊠ Use **bsts** to
  - ⊠ Fit structural model with regression
  - ⊠ Regression posterior
  - ⊠ Forecast
  - ⊠ Custom regresson prior

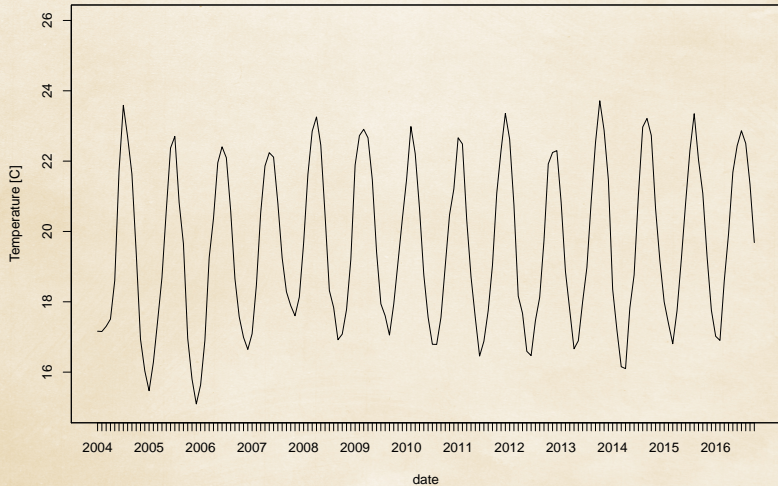

- ⊠ Sea Surface Temperature near Gibraltar
- ⊠ Aggregated monthly
- ⊠ January 2004 to November 2017
- ⊠ Covariates: depth at 10, 20, ..., 90 meters

SST of Gilbralter region

## Setup

```
library(readr)
library(bsts)

gib <- read_csv("data/gilbralter_time_series_r.csv",
                col_types = cols(startDate = col_skip(),
                                timeIdx = col_skip()))
names(gib) <- c('SST', '10', '20', '30', '40',
                '50', '60', '70', '80', '90')
gib <- zooreg(gibraltar, start = c(2004, 1, 1),
              end = c(2017, 11, 29),
              frequency = 12)
plot(gib$SST, main='SST of Gilbralter region',
     xlab='date',
     ylab='Temperature [C]',
     ylim=c(15, 26))
```
